# Enterworks Catalog Builder

A single, powerful desktop application that lets suppliers quickly and easily synchronize with UCCnet and multiple trading partners.

**E**nterworks Catalog Builder™ is the ideal solution for suppliers who want a UCCnet solution that's easy to install, set up and use. With an embedded database for the central UCCnet data repository behind the supplier's firewall, and a Web-enabled user console, Enterworks Catalog Builder gathers, stores, and validates item data. And, Enterworks Catalog Builder manages item data for synchronization with the UCCnet GLOBALregistry and trading partners.

With Enterworks Catalog Builder, suppliers can create a Master Catalog by pulling item information from one or multiple operational systems (ERP, CRM, spreadsheets, etc). Enterworks Catalog Builder also provides the flexibility to manually add information as required to build UCCnet-compliant data sets. In addition, industry and customer specific catalogs (with pricing) can be easily generated

as extensions of the Master Catalog.

## Master Catalog

The Master Catalog is the internal catalog that aggregates data from multiple sources. The data is validated against UCCnet standards and stored in this catalog. All additional catalogs are derived from the Master Catalog.

## Suppliers Speak

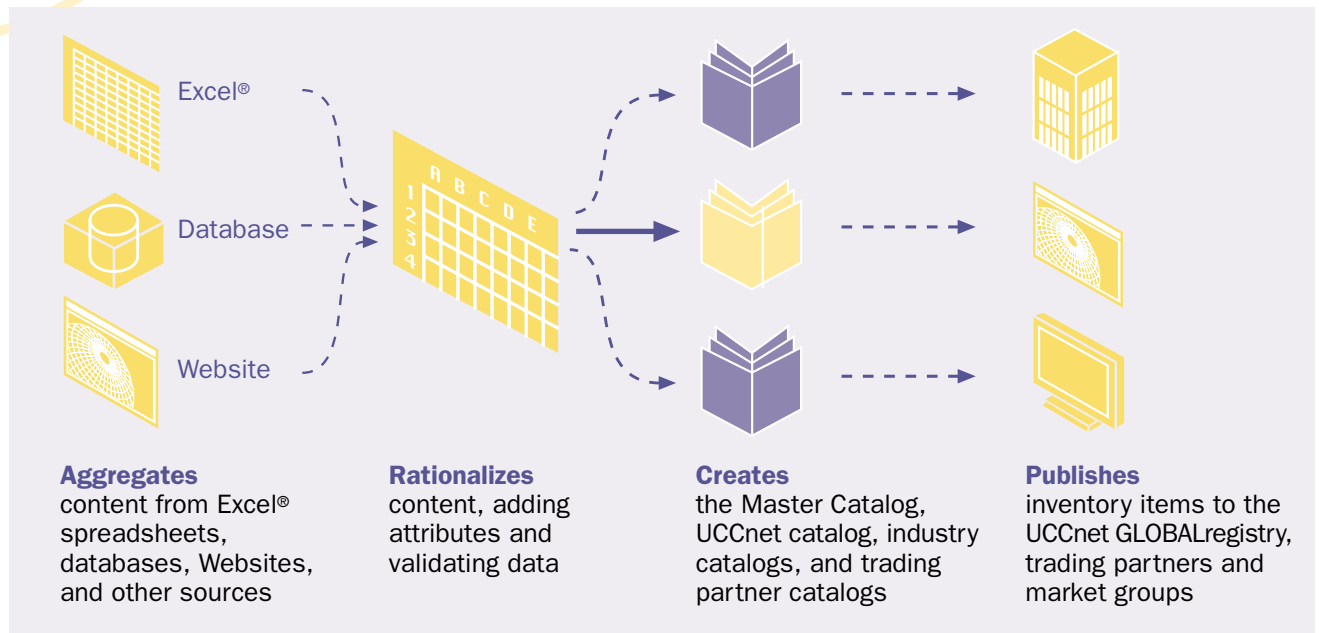

**Catalog Builder is very easy to use. We're business people around here, not technical types. But we produced our first catalog in less than an hour.**

## UCCnet Catalog

As a subset of the Master Catalog, the UCCnet catalog contains the core information that's added and published to UCCnet, as well as the status of each item that's maintained within the catalog. UCCnet GLOBALregistry item status is tracked as *pending*, *successful* or *failed*. The status of an inventory item with a customer is tracked as *published*, *authorized* or *rejected*.

## What Catalog Builder Does

## Industry Catalog

An industry catalog contains the extended item information required by trading partners in specific industries such as hardlines and produce/grocery. This information can be published to specific customers and market groups based on authorizations received from trading partners through UCCnet indicating the customer wants to receive the extended information.

## Customer/Market Group Catalog

A customer/market group catalog contains extended information, such as confidential pricing that pertains to a specific customer or market group. Similar to an industry catalog, this extended information can be

▲ **An interactive training CD is included with every copy of Enterworks Catalog Builder to ensure that users get up and running quickly.**

published to specific customers and market groups based on authorizations received from trading partners through UCCnet.

Enterworks Catalog Builder does more than gather, aggregate and validate content; it maintains several status checks for items. These status checks provide the ability to monitor the status of inventory items in conjunction with the UCCnet GLOBALregistry and display an item status for each customer.

## UCCnet and Beyond

Enterworks Catalog Builder meets the challenges of creating and managing several catalogs for multiple purposes and trading partners. Beyond the UCCnet-compliant format, Enterworks Catalog Builder can generate catalogs in all industry formats, including those required by Ariba, Commerce One, SAP, and Oracle iProcure, as well as those in the EDI 832 structure.

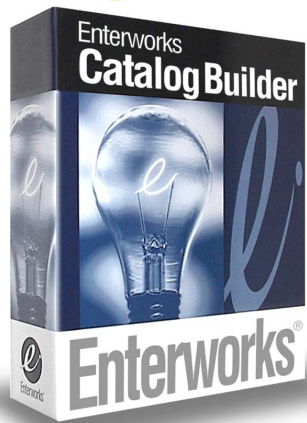

## Now is the Time to Act

Becoming an OEM partner and incorporating Enterworks Catalog Builder in your UCCnet solution gives you tremendous new revenue possibilities. To get started today, call Steve Perkins, Enterworks' Director of Business Development, for more information at **1.888.242.8356**, or e-mail him at [steve.perkins@enterworks.com](mailto:steve.perkins@enterworks.com).

## Suppliers Speak

**Finally, a tool that accepts my data as it is— without pre-formatting or running extracts. Just plug and play. Catalog Builder lets me focus on the quality of my content, and not worry about bits and bytes.**

# About Enterworks

Enterworks®, Inc. develops, markets, and supports software that enables buyers and suppliers to create, manage, and share electronic catalogs for faster return on their eProcurement investment. The Company's applications are built on proven business process and content integration technology used by some of the world's largest manufacturing companies, financial services firms, technology providers, and US government military and intelligence agencies. In addition, the company's solutions are embedded by global technology vendors and marketed by partners worldwide.
